Hackscreen is what is shown on the TVs

 Hackscreen is a webapp that shows useful content to users. The TVs do not have signal at all, and shouldn't be used as such unless a TV license is bought. Instead of being turned off Cone made a webapp that cycles through content.

Code & Suggestions

Code can be found here. https://github.com/conorriches/hackscreen-react Please submit any ideas as issues. Feel free to create PRs against this repo for peer review.
