

Let's get hot!

Update! Things got really cold really fast. We realised we would need a "Far IR" solution which is more expensive at roughly two hundred pounds.

Therefore we replaced our 1.5kw heater with a new 2.5kw one using this pledge.

Thank you those involved.

- The oil filled radiator is on its last wheels.
 - Oil filled radiator isn't cutting it, can be knocked over/plugged in anywhere
 - Circuit issue remains, extension reels aren't a good solution.
 - Why not use infrared lamps??
 - Benefits are vast:
 - Safe - high up out of reach, away from flammable things, can't fall over/be kicked
 - Dedicated circuit - that can't have other stuff plugged in so no melty moments
 - Heats people and things, not air
 - Can be mounted from ceiling or pillars for good coverage
 - Timer switch for instant heat that doesn't stay on all night or risk being left on
 - With them in place we can forbid plugging in of any heaters!

Costings

- 2 x £35 = £70 (without stand)
<https://www.primrose.co.uk/2kw-wall-mounted-quartz-bulb-electric-heater-with-power-settings-fi-refly-p-59902.html>
- 15 x 1m suitable cable
- 1x timer switch to power the two heaters
- 2x fittings to hold lamps to pillars.

Pledges

Name	Amount
cone	£20
egg	£20
rossy	£20
Total	£60
