

The Knock Clock is a clock which tells the time through the medium of knocking.

It was thrown together quite quickly in about 2012 for a mini Maker Faire by [Tallscreen](#).

There is a write-up for the project here... <http://www.paulplowman.com/projects/knock-clock.htm>

The clock has since appeared on the TV show 'QI'.

[Tallscreen](#) has since created a better version of the clock with a neater box, and more accurate clock, and not held together with gaffa tape!
