

This team maintains and trains people in the use of the 3D printers in the space.

## Equipment/Projects

The space has 2 printers - they are the [Mendel90](#) and the [MendelMax](#).

## Equipment Wanted

- A resin printer
- Any donations of 3/2.85 mm filament for the space stock are welcome

## Consumables

Filament is supplied by members - the space keeps a small supply from donations for demonstrations and space projects.

We've found [3DFilaPrint](#) to both supply good material and also be fairly good price wise.

## People

The following people are members of the team, and can deliver training

- Greg Morris (@gregmorris)
