

Authentication

If we want this to work with the manchester hackspace login then we'll need to be able to authenticate with the existing setup.

According to Connor

So the system uses standard laravel authentication to log in (laravel being the php framework the site is built in) and for the forum SSO I just coded something which follows their guide here <https://meta.discourse.org/t/setup-discourseconnect-official-single-sign-on-for-discourse-sso/13045>
