

Markdown Syntax

The way this wiki is setup at the moment is an instance of dokuwiki. However there is a plugin installed called CommonMark, this changes the used syntax to be markdown instead of the native dokuwiki syntax

Markdown syntax

Dokuwiki Elements

We can still use dokuwiki plugins / special controls when needed by using a code fence block labeled with the dokuwiki name

```
```dokuwiki
Dokuwiki syntax goes here
```
```

Fixme

One of the inbuilt controls that still works without any code fences is the Fixme label. If we write the text **FIXME** in all capitals the end result is

Wrap
