

Plugins

bootswrapper

Bootswrapper allows us to use some of the bootstrap controls within the page.

- <https://www.dokuwiki.org/plugin:bootswrapper>

There's quite a few, so I'll just show the jumbotron. Note the syntax inside the control has to be dokuwiki syntax instead of markdown which limit's its use a bit.

```
```dokuwiki
<jumbotron>
===== Hello, world! =====
```

This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.

```
</jumbotron>
```
```

Hello, world!

This is a simple hero unit, a simple jumbotron-style component for calling extra attention to featured content or information.

cellbg

cellbg allows us to control the background color of cells within tables

- <https://www.dokuwiki.org/plugin:cellbg>

| Header1 | Header2 |
|---------|---------|
| Row1-1 | Row1-2 |
| Row2-1 | Row2-2 |

This seems to work ok with the markdown table syntax

syntaxhighlightjs

syntaxhighlightjs is the plugin used for highlighting code blocks. The name after the 3 single back ticks is the name of the language to highlight for

- <https://www.dokuwiki.org/plugin:syntaxhighlightjs>

```
```py
Example Python code
def my_function():
 print("Hello from a function")
```
```

```
# Example Python code
def my_function():
    print("Hello from a function")
```

dw2pdf / bookcreator

dw2pdf is an addon for exporting pages as a pdf. There's also a separate plugin called bookcreator installed for generating a pdf of multiple pages.

- <https://www.dokuwiki.org/plugin:dw2pdf>
- <https://www.dokuwiki.org/plugin:bookcreator>

Gallery

The gallery plugin allows us to show all the images in a namespace / directory

- <https://www.dokuwiki.org/plugin:gallery>

```
{{gallery>:wiki}}
```

searchtablejs

searchtablejs allows for filterable tables. However it does rely on the dokuwiki syntax to work, also the sortable aspect doesn't seem to work with the bootstrap theme.

- <https://www.dokuwiki.org/plugin:searchtablejs>

```
```dokuwiki
<searchtable>
^ Test ^ Col1 ^ Col2 ^
| Row1 | Val1 | Val2 |
| Row2 | Val3 | Val4 |
</searchtable>
```
```

Filter:

<sortable>

| Test | Col1 | Col2 |
|------|------|------|
| Row1 | Val1 | Val2 |
| Row2 | Val3 | Val4 |

</sortable>

Barcode

The barcode plugin allows us to create QR Codes for pages

- <https://www.dokuwiki.org/plugin:barcode>

For example this creates a barcode which links to the current url of this page

```
```dokuwiki
~~~BARCODE~~~
```
```

## Wrap

The Wrap plugin allows for highlighting warnings or errors, things to watch out for

- <https://www.dokuwiki.org/plugin:wrap>

```
```dokuwiki
<WRAP center round important 60%>
important box
</WRAP>
```
```

important box

## Draw IO

This one is very handy, it allows us to embed a draw.io flow chart editor directly into the page. The file is then saved in the normal file attachment area in the wiki

- <https://www.dokuwiki.org/plugin:drawio>

```
{{drawio>wiki:diagram1.png}}
```

## Googlemaps3

For when we want to insert a map into a page

- <https://www.dokuwiki.org/plugin:googlemaps3>

```
```dokuwiki
<googlemaps3 lat="53.48448852558447" lng="-2.2138890729819662" zoom="15">
53.48444383692624, -2.2139534459987114, Manchester Hackspace
</googlemaps3>
```
```

## xkcd

The xkcd plugin adds a small webcomic to the page

- <https://www.dokuwiki.org/plugin:xkcd>

[xkcd]

## Backend Plugins

- Git Backed allows us to backup the wiki content to a git repo  
<https://www.dokuwiki.org/plugin:gitbacked>
- Preregister for email verification <https://www.dokuwiki.org/plugin:preregister>

- Captcha plugin <https://www.dokuwiki.org/plugin:captcha>
